Sig nprovement in progression-free

ASCEND-1 STUDY DESIGN

Objective: To evaluate the efficacy and safety of Oncura in patients with EGFR-mutated metastatic NSCLC.

Key inclusion criteria:

- Adults ≥18 years
- Confirmed EGFR mutation
- Metastatic NSCLC
- No prior EGFR-targeted therapy

Primary endpoint:

- Progression-free survival (PFS)

Secondary endpoints:

- Overall response rate (ORR)
- Overall survival (OS)
- Duration of response
- Safety and tolerability

Treatment arms:

Oncura 80 mg once weekly

- n = 312

Comparator EGFR therapy

- n = 310

Completed study

- ~92–95% completion rate

*Data from ASCEND-1 phase III study
HR: hazard ratio; **PFS:** progression-free survival

Oncura
(oncurimab) 80mg
