Targeting the EGFR driver mutation

Oncura is an oral EGFR inhibitor designed to block signalling that drives tumour cell growth.

1

EGFR mutation

Abnormal EGFR signalling drives uncontrolled cell growth

2

Oncura inhibits EGFR

Blocks downstream signalling pathways

3

Reduced tumour growth

Slows proliferation and supports disease control

Oral, targeted therapy for **EGFR-mutated metastatic NSCLC**

- Designed for **once-weekly dosing**
- Targets the driver pathway underlying tumour growth

MOA VIDEO +

EGFR: epidermal growth factor receptor.
